

Project Design Phase

Problem – Solution Fit Template

Date	06 July 2026
Team ID	
Project Name	Plugging into the Future: An Exploration of Electricity Consumption Patterns
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) Who is your customer? - Energy analysts - Government agencies - Electricity boards and utilities - Policymakers and planners - Researchers and academicians - Students and data enthusiasts	CS	6. CUSTOMER CONSTRAINTS What constraints prevent your customers from taking action or limit their choices? - Lack of easy-to-understand visual insights - Time-consuming manual data analysis - Limited tools for interactive data exploration - Large volume of data and multiple dimensions - Need for accurate and real-time analysis - Dependence on spreadsheet reports	CC	5. AVAILABLE SOLUTIONS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? - Excel / Google Sheets – Simple but not interactive - Manual Reports – Time-consuming and less visual - Basic Charts – Limited insights and interactivity - Other BI Tools – Powerful but may require technical expertise Our Advantage: Interactive dashboards, easy filters, multi-level analysis, visual storytelling.	AS	Explore AS, differentiate	
	2. JOBS-TO-BE-DONE / PROBLEMS Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides. - Analyze electricity consumption across states and regions - Identify consumption trends over time (monthly, quarterly, yearly) - Compare Top N & Bottom N states - Analyze impact of lockdown vs recovery period - Generate insights for planning and decision-making	J&P	9. PROBLEM ROOT CAUSE What is the real reason that this problem exists? What is the back story behind the need to do this job? - Large and complex electricity data is difficult to analyze manually - Lack of interactive tools for multi-dimensional analysis - Data scattered across different sources - Need for faster, accurate and visual insights for better decision-making	RC	7. BEHAVIOUR What does your customer do to address the problem and get the job done? Directly Related: - Collect electricity consumption data - Use Excel / manual calculations - Create reports for analysis - Compare and identify trends Indirectly Related: - Attend meetings & discussions - Search for information online - Refer government publications - Consult with domain experts	BE		8. CHANNELS OF BEHAVIOUR What kind of actions do customers take online? Extract online channels from #7 8.1 ONLINE - Search for data online - Download government datasets - Read reports & articles - Watch tutorials / webinars - Use online BI communities 8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 - Attend meetings - Discuss with team / experts - Collect data from reports / documents - Present findings to stakeholders
Focus on J&P, tap into BE, understand RC	3. TRIGGERS What triggers customers to act? - Need for monthly / quarterly reports - Government / regulatory requirements - Sudden changes in consumption patterns - Awareness about data-driven decisions - Impact of events (e.g., lockdowns, extreme weather) - Demand for efficient energy management	TR	4. EMOTIONS: BEFORE / AFTER How do customers feel before a problem or job and afterwards? Before: - Confused - Overwhelmed with large data - Uncertain about trends - Lack of clarity for decision-making After: - Clear insights - Confident in decisions - In control of data - Satisfied with accurate reports	EM	10. YOUR SOLUTION If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour. Our Solution: An interactive Tableau dashboard that visualizes and analyzes electricity consumption patterns across states, regions and time periods. It provides interactive filters, multiple visualizations and reports to help users generate meaningful insights quickly.	SL	9. PROBLEM ROOT CAUSE What is the real reason that this problem exists? - Data is huge, complex and scattered - Lack of interactive and easy-to-use tools - Manual analysis is time-consuming and error-prone - Need for real-time, accurate and visual insights - Growing demand for data-driven energy planning and optimization	RC
