

Project Design Phase Proposed Solution Template

Date	07 July 2026
Team ID	
Project Name	Plugging into the Future: An Exploration of Electricity Consumption Patterns
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Analyzing large volumes of electricity consumption data across different states and regions is difficult without proper visualization. There is a need for an interactive system to identify consumption trends, compare usage patterns, and analyze the impact of the COVID-19 lockdown on electricity consumption.
2.	Idea / Solution description	Develop an interactive Tableau dashboard that analyzes electricity consumption data from 2019–2020. The dashboard provides state-wise, region-wise, monthly, quarterly, yearly, and lockdown vs. recovery analysis using interactive visualizations and filters.
3.	Novelty / Uniqueness	The solution combines multiple analyses, including state-wise, region-wise, Top N & Bottom N, and lockdown impact, into a single interactive dashboard. It enables users to explore electricity consumption trends through dynamic filters and visualizations.
4.	Social Impact / Customer Satisfaction	The project helps energy analysts, government organizations, and policymakers understand electricity consumption patterns, supporting better energy planning, resource allocation, and informed decision-making.
5.	Business Model (Revenue Model)	The dashboard can be used by electricity boards and organizations for electricity consumption analysis and reporting.
6.	Scalability of the Solution	The solution can be easily expanded by adding new data, years, states, and dashboards.
